Subject: Terrabase March-April 2008 Newsletter

"Micro-scale energy production to provide for your needs and to add a little back to the grid. Amongst our other solutions, Terrabase provide the monitoring and billing processes small and large scale housing developments need, as demonstrated at Ecobuild last month."

Our favourites

<http://www.innovationsforthebuiltenvironment.co.uk/> - **Ecobuild:** Over 24,000 visitors, 500 exhibitors and 500 speakers participated in Ecobuild 2008, the world's biggest event dedicated to sustainable design, construction and the built environment.

www.opera.com - In our humble opinion the best web browser for your mobile phone

www.apple.com/safari - The planet's coolest web browser is now available for Windows too.

Featured Article**The Energy Revolution**

We could be on the cusp of an energy revolution similar in scale to the industrial revolution, in which we move from global anxiety over limits to energy supplies to an energy surplus where environmental care is the catalyst for advancement.

The cause of the industrial revolution of the early 18th century is not entirely clear. One point of view could be that William Wilberforce's successful abolition of slavery led bright minds to seek other ways to get hard work done now slavery wasn't an option.

It could be argued that in the same way, an eventual ban on the 'easy' energy in the form of fossil fuels may lead to cottage industrial innovation so each household naturally becomes an energy producer.

Home-owners taking advantage of their land and space to implement energy harvesting technologies, the proceeds of which they sell back to the national grid.

At the moment the technologies are niche and expensive, however, not that expensive and it's very early days. If, by necessity, these technologies become mass market, you will see a dramatic reduction in their costs. Perhaps we will not give a second thought to roof tiles also being solar panels, not give aero generators discretely built into roof apices more than one look. We may consider it very odd that we used to throw away our grass clippings.

Perhaps decentralised production of cheap energy in which all the workers are committed volunteers could be a natural consequence of the eventual banning of fossil fuels given the application of the right game theory from the powers that be.

DevApp land valuation software special offer for energy producers

If you are one of the growing army of early adopters who can see the 'no-brainer' advantages of developing homes that are potential energy producers such as those developed by www.zedfactory.com then we will supply you with DevApp for half price.
